

A blast on March 15, 2012 at 5:45 pm. First picture shows the blast, second picture a few seconds later shows the dust spreading. As the dust reached our house, the particles were so large I could feel them hitting my face.

At right the dust is so bad you can't see the trees!

Taken from road 700 E. when the machine 1st started

April 19, 2012 2 long blasts at about 2 pm Above dust from first blast. Below dust from second blast.

Below--- This is a picture of the blast going off on a bright sunny day. You can see the dust start to bellow out of the ground.

A few moments later you can't even see the trees

Shortly after this was taken it was shown to Bernie Rottman or Peabody Coal who came to talk with us about glass breakage. He took picture of stainless steel top table to show mine and now they are wanting to high pressure wash our house!

Dust at our house April 25, 2012

↑ Black berry bush along Black Top road covered with dust

Shale dust that is in the air most of time comes from the shovel.

peabody

< This is the dust that has accumulated since we had the foot of snow on Dec. 28, 2012.

Picture at right taken after Christmas snow. Removed $\frac{1}{2}$ inch of snow to show color contrast of clean snow and darker surface from dust!

this continues in cycles Dust - Rain or melting snow
Back to clean surface + then dust again.
Above Shale Dust
